

August 2026 shift incentive

Pacific Surfaces - Production. The month from 06:00 on 1 August to 06:00 on 1 September, scored under the shift incentive scheme with the two counting rules agreed in August. Figures from the ERP as of 2 September 2026, 15:48 IST; the live position is at erp.pacific-surfaces.com/scoreboard/incentive?month=2026-08.

PROVISIONAL - NOT YET PAYABLE. August has not cleared the 7,000 floor - yet. Counted today, the plant made **6,207** good slabs against a floor of 7,000, so as things stand there is nothing to pay out. **1,100** slabs pressed in August are still waiting for QC. Graded at the 96.2% the month has actually run, they take it to about **7,617** - over the line, and into the first pool of **Rs 3 lakh**. This month is decided at the polishing line, not at the press.

6,207 counted good slabs today	7,000 where the pool starts	1,100 still waiting for QC	~7,617 projected when grading is done	Rs 3 lakh the pool that unlocks
--	---------------------------------------	--------------------------------------	---	---

The two counting rules

Both change what a slab is worth. Neither changes how many slabs you have to make.

Rule	What it says	Worked
Grade	A grade A slab counts as one. A grade B counts as half. A reject counts as nothing - never a minus, so there is no reason to leave a bad slab out of MIS.	A = 1, B = ½, C = 0
Difficulty	If the hour's STANDARD output is 10 slabs or fewer, every good slab in it counts twice. The multiplier is set by the standard, not by what you achieved - nobody earns it by working slowly.	Standard <= 10/hr: A = 2, B = 1, C = 0

In August the difficulty rule is worth **1,264** counted slabs: 1,266 good slabs came from slow-design hours and counted twice. Counted the old way the month stands at 4,943 even before the waiting slabs grade - and it is the doubling that puts the floor within reach.

August in numbers

92 shifts run	6,261 slabs pressed	5,137 graded by QC	1,100 awaiting QC	96.2% grade share (A = 1, B = ½)	6,207 counted good slabs
-------------------------	-------------------------------	------------------------------	-----------------------------	--	------------------------------------

Of the 5,137 slabs QC has reached: 4,869 grade A, 148 grade B, 120 rejects - 4,943 good slabs before the difficulty rule, 1,264 added by it. A grade share of 96.2% is a good month. A further 24 slabs were routed by QC to cut-to-size and will not grade; they are neither counted nor waited for.

The three shifts

Shift	Shifts	Pressed	Graded	Counted slabs	Per shift	Grade share	Quality score	Share of pool
1 Shift C	31	2,220	1,892	2,340	80.0	96.7%	97.0%	35.4%
2 Shift A	30	2,081	1,691	1,960	73.7	95.9%	89.5%	32.6%
3 Shift B	31	1,960	1,554	1,907	71.6	95.9%	89.5%	32.0%
Plant	92	6,261	5,137	6,207	75.2	96.2%	-	100%

Counted slabs already include both rules. Per shift is counted slabs divided by shifts worked, after removing the time the line was stopped by breakdown or power cut. Quality score stretches the grade share between the 87% minimum and the 97% target.

Shift C leads on both halves at once - the most counted slabs per shift and the best grade share. 8.4 slabs a shift is the whole gap between first and third: one good hour.

How the money is worked out

Five steps, and every one of them traces back to the individual slab records behind it.

- # **Count each shift's good slabs.** Shift C: 1,809 A + 41 B + 42 rejects = 1,829½ good, then 508 slow-design slabs counted twice -> **2,340 counted**.
- # **Divide by the shifts actually worked.** 2,340 counted / 29.3 running shifts = **80.0 a shift**. Time the line was down for breakdown or power cut comes out of the divisor.
- # **Score the quality.** (96.7% - 87%) / (97% - 87%) = **97.0%**. 87% or below scores nothing; 97% or above scores the full 100%.
- # **Split the pool 70 / 30.** 70% x (80.0 / 225.3) + 30% x (97.0 / 275.9) = 24.8% + 10.5% = **35.4%** of the pool.
- # **Turn the share into a percentage of salary.** 35.4% x Rs 3 lakh = Rs 1,06,169, divided by the shift's third of the Rs 41 lakh bill (Rs 13,66,667) = **7.77% of your own salary**.

What each person would receive

On the projected month - a Rs 3 lakh pool, once QC finishes grading August. Worked on the salary bands in the incentive notice; your own figure is the same percentage of your own salary.

Shift	Share	Of own salary	Operator Rs 20,000	Supervisor / Incharge Rs 52,500	Category B (R&D) Rs 75,000	Manager Rs 1,75,000
1 Shift C	35.4%	7.77%	Rs 1,554	Rs 4,078	Rs 5,826	Rs 13,595
2 Shift A	32.6%	7.16%	Rs 1,433	Rs 3,761	Rs 5,373	Rs 12,538
3 Shift B	32.0%	7.02%	Rs 1,404	Rs 3,685	Rs 5,264	Rs 12,282

The three shares add to exactly 100%, so the whole pool is paid out and nothing is held back. The row the plant lands on is worth far more than the place you finish in: 8,000 counted slabs would double the pool and pay every figure in this table twice over.

What happens next - 1,100 slabs decide this month

August cannot be settled until QC has graded the slabs already pressed. Every one of them still counts for the shift that made it, whenever it is graded. Where they are today: **533** at QC, not yet graded; **104** on the polishing line; **463** pressed and not at polish yet. QC has been grading about **150 slabs a day** over the last week - at that pace the backlog clears in roughly **8 days**.

Design	Batch	Waiting	Counts x2	At QC	At polish	Pressed only	Design's grade share so far
DESERT SILK	D1422	147	-	51	1	95	88.8% on 58
TIFFINY	D1432	116	10	3	-	113	10 graded - too few to say
Carrara Cloud	D1430	99	-	33	9	57	95.6% on 848
Calacatta Gold	D1425	92	92	57	1	34	93.7% on 143
Calacatta Grey	D1427	63	63	2	-	61	3 graded - too few to say
Arva White	D1413	60	-	33	5	-	98.6% on 382
Carrara Beige	D1431	54	-	-	-	54	none graded yet
Brilliant White	D1405	50	-	50	-	-	76.9% on 80
Aureate	D1423	45	32	45	-	-	96.9% on 254
ARTEMIS	D1428	44	44	2	-	42	28 graded - too few to say

The 33 design-and-batch groups with slabs waiting, largest 10 shown. The projection assumes the outstanding slabs grade at the same 96.2% the month has already achieved. If quality holds, August pays. If a large batch comes back badly, it may not - which is the honest position, and the reason this notice is marked provisional.

The basis of these figures

- **Provisional.** August is not settled: 1,100 slabs are ungraded and the counted total is below the 7,000 floor as things stand. No payment is due on this notice.
- **Establishment.** Amounts are computed from the assumed establishment in the incentive notice - 75 operators, 30 supervisors / pigment incharges / line incharges, 2 Category B (R&D) and 5 managers, 112 in all, on a production salary bill of Rs 41,00,000 a month - and from that bill being shared equally across the three shifts. A change in either changes every amount here.
- **Safety comes first.** Any lost-time accident in a shift means no incentive for that shift that month, whatever the score. Nothing in these figures checks for one.
- **Counting.** The month is the shift window - 06:00 on the 1st to 06:00 on the 1st of the next month - not the calendar date. Counted slabs are rounded per shift instance, as the scoreboard does; the unrounded plant total is a few slabs lower and does not change the row.
- **Quality score.** Each shift's month-long grade share is scored once between 87% and 97%, which is how the notice on the wall describes it. The scoreboard averages each night's score instead; on August the two differ by at most 0.21 points of share (about Rs 9 to an operator). Management should confirm which reading applies before settlement.
- **Every point can be traced.** Scores are built from the MIS hours your shift filed and the QC grades on the slabs those hours claimed. If you believe a number is wrong, raise it with your incharge - it can be followed back to the individual slab.
